

## Future food system scenarios

Workshops where in-country experts outlined key challenges for a sustainable nutrition-secure future:

How does agricultural land use need to change?

How quickly is the climate changing and what policies are needed to adapt?

What trade policies are needed?

## Integrated modelling

Summarised with systematic confidence assessments in the areas of:

Climate-crop impacts and adaptation

Trade and nutrition security

Emissions, soils, erosion

Food production and land use

Climate shocks and extremes

Pests and diseases

Irrigation

## Analysis of:

Households and livelihoods

Soil health

Seed systems

Crop and livestock diversification

Water use

Crop health eg. Aflatoxins

## Targeting of results

In-country policy expertise, giving guidance on targeting of results into important policy areas

## All results summarised

By scenario, by country and ultimately resulting in policy recommendations
